4.1

- Take a screenshot of the site along with its Let's Encrypt certificate and include it in your lab notebook
  - 
  - 
4.2

- Take a screenshot of the results for your lab notebook
  -

```
jjb24@course-vm:~/cs430-src/04_container_dockerhub$ docker images
REPOSITORY    TAG       IMAGE ID       CREATED              SIZE
helloubuntu   latest    d7bd616e2721   About a minute ago   501MB
Display a menu -vm:~/cs430-src/04_container_dockerhub$
```

- Run the image directly from Docker Hub and show a screenshot of the output of the command in your lab notebook.

```
jjb24@course-vm:~/cs430-src/04_container_dockerhub$ docker run -d
i -p 8000:5000 --name hellou jjb24/helloubuntu

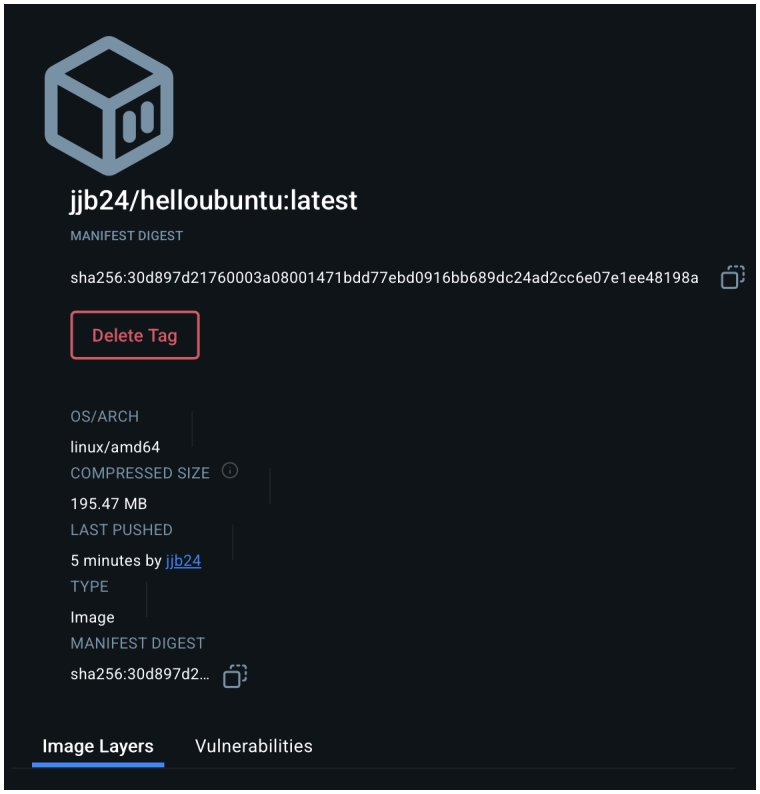
Display a menu -vm:~/cs430-src/04_container_dockerhub$
```

Take a screenshot of the container image and its size for your lab notebook.



What layer adds the most to the container image? How much does it add?

```
9 RUN /bin/sh -c apt-get install                    119.98 MB
```

about 120mb

Take a screenshot of the image generated and its size for your lab notebook. How much smaller is the image than the Ubuntu one?

```
jjb24@course-vm:~/cs430-src/04_container_dockerhub$ docker images
REPOSITORY    TAG       IMAGE ID       CREATED          SIZE
helloalpine   latest    192e08bff156   5 minutes ago    60.7MB
jjb24@course-vm:~/cs430-src/04_container_dockerhub$
```

its 440mb smaller

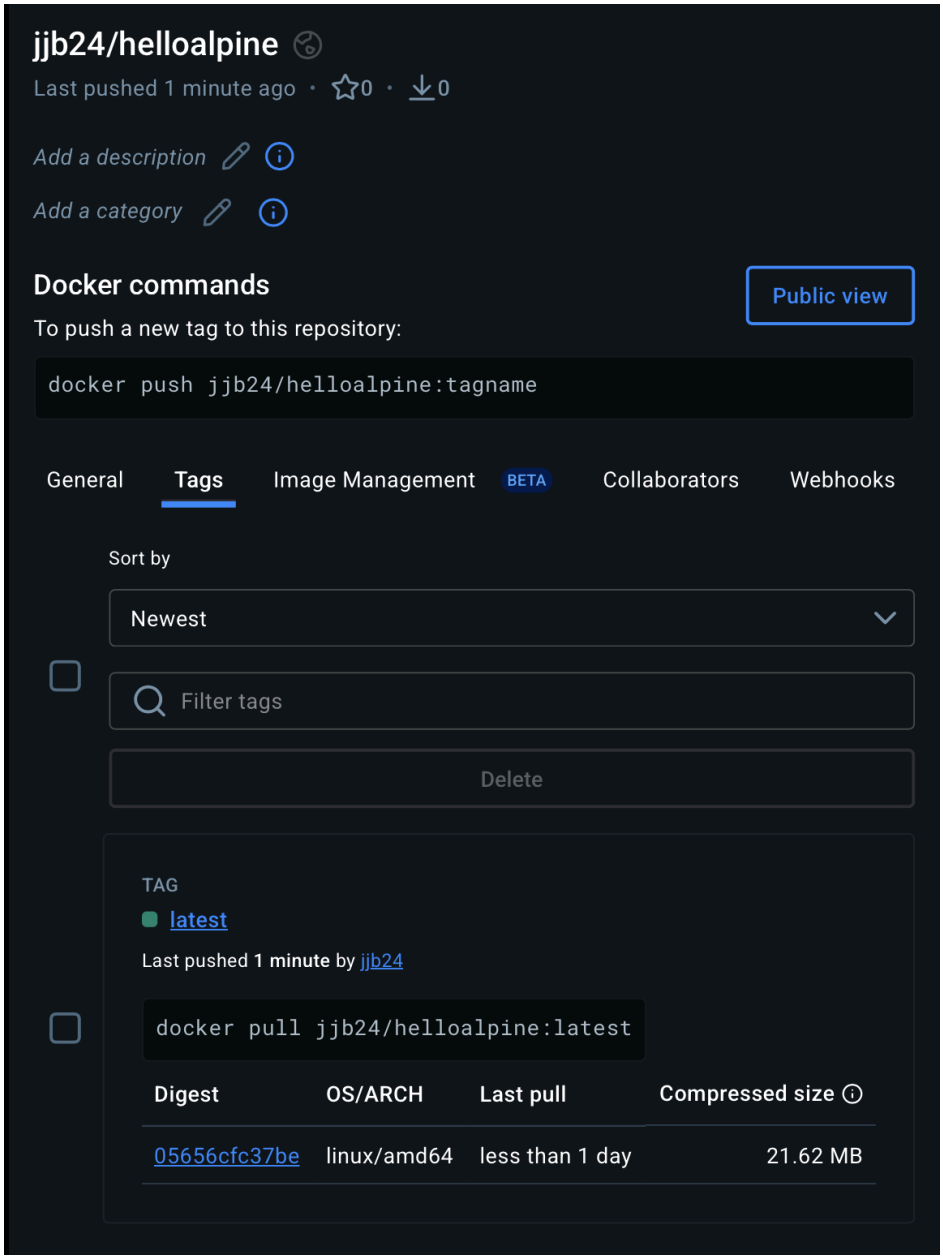
- Show the output of this command in a screenshot for your lab notebook. What might have happened?
  -
```
jjb24@course-vm:~/cs430-src/04_container_dockerhub$ docker exec -
it helloa /bin/bash
OCI runtime exec failed: exec failed: unable to start container p
rocess: exec: "/bin/bash": stat /bin/bash: no such file or direct
ory: unknown
jjb24@course-vm:~/cs430-src/04_container_dockerhub$
```
  - i'm guessing this image doesn't have bash

Take a screenshot of the output of each

```
jjb24@course-vm:~/cs430-src/04_container_dockerhub$ docker exec -
it helloa /bin/sh
/app #
```

```
/app # cat /etc/alpine-release
3.22.2
/app # ps -ef
PID   USER     TIME  COMMAND
    1 root      0:00 python3 app.py
    7 root      0:00 /usr/local/bin/python3 -c from multiprocess
    8 root      0:00 /usr/local/bin/python3 app.py
    9 root      0:00 /usr/local/bin/python3 -c from multiprocess
   18 root      0:00 /bin/sh
   26 root      0:00 ps -ef
```

Take a screenshot of the container image and its size.



Take a screenshot of the entry that includes the VM's external IP address for your lab notebook
