5.1 - #1-2

What role is attached to the Compute Engine default service account?
The editor role is the default service account

Would it be sufficient for the VM to perform its functions (i.e. creating buckets and reading/writing objects in them)?
Yes the editor role would be sufficient enough for the VM to perform its functions.

What permissions are given by the default access scope to Cloud Storage?
The default access scope for a new Compute Engine instance provides read-only access to Google Cloud Storage

Would they be sufficient for the VM to perform its functions (i.e. creating buckets and reading/writing objects in them)?
No, read-only access is not sufficient for the VM to perform its functions. It needs write access to create buckets for example.

What settings are possible for setting the VM's access to the Storage API?
Read only, write only, read write, full

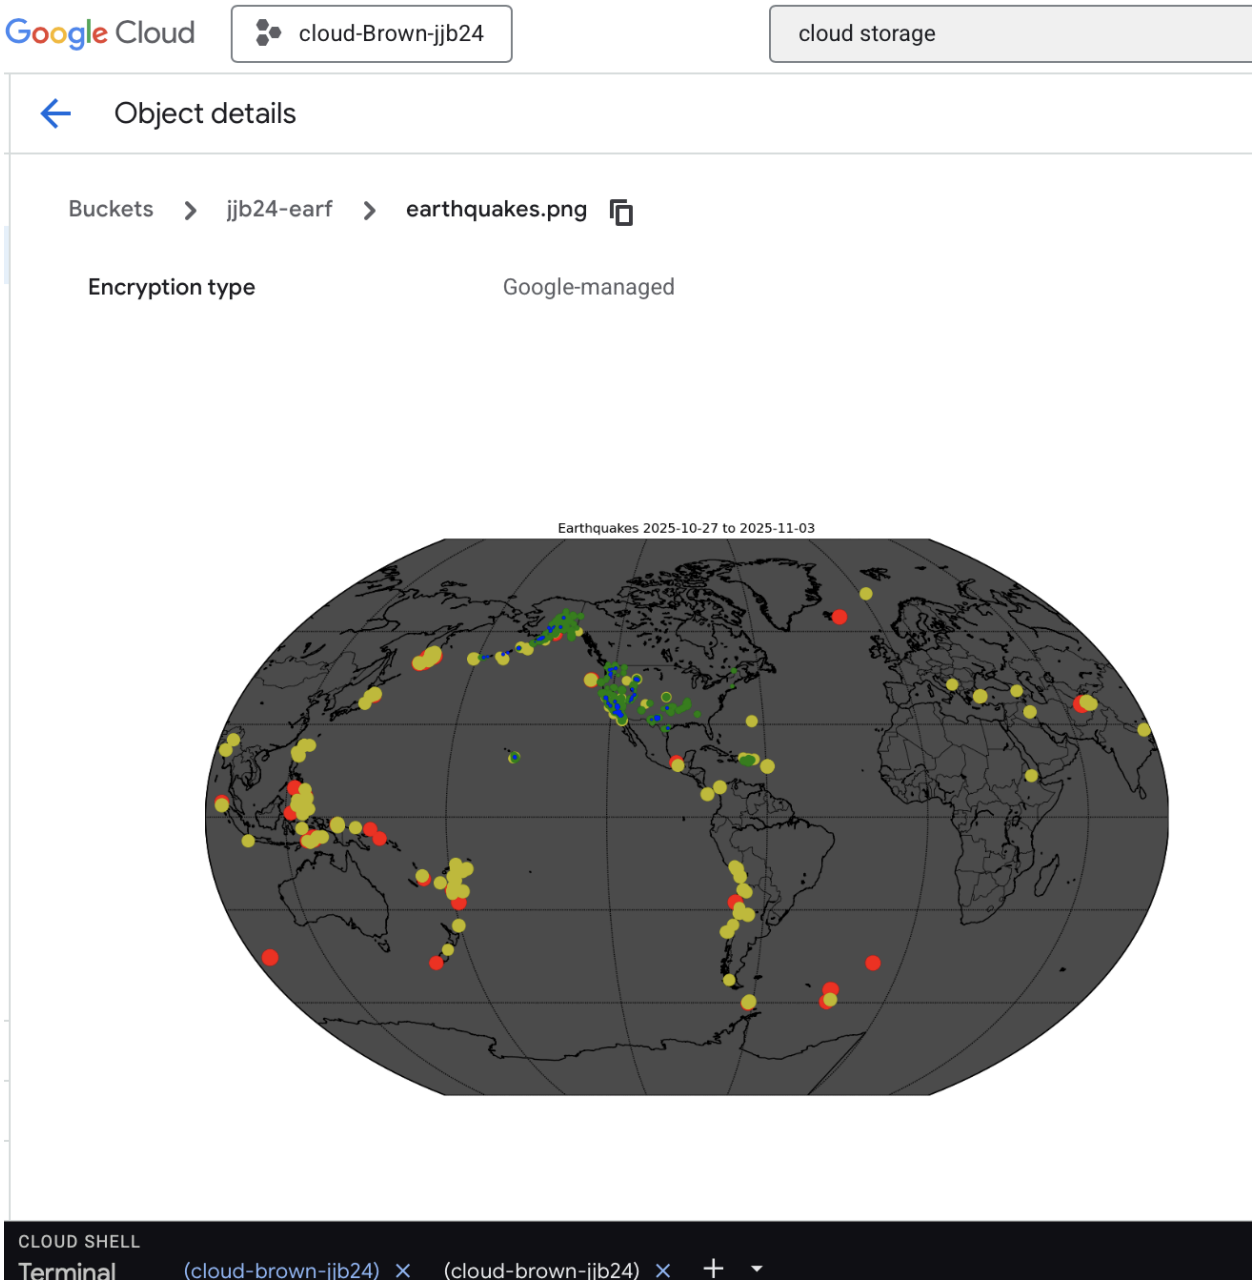
What time did the latest earthquake happen?
2025-11-03T21:08:21.318Z.

What was the magnitude (mag)?
2.3

Where was the place it happened?
12 km ESE of Balmorhea, Texas

3-5

Take a screenshot of the image that has been created for your lab notebook.



6-9

What is the exact error message that is returned?
WARNING: Some requests did not succeed.
 - Required 'compute.instances.list' permission for 'projects/cloud-brown-jjb24'
Listed 0 items.

What role needs to be added to the service account's permissions for the VM to have access to list the project's Compute Engine resources?
Compute viewer

Take a screenshot of the output for your notebook.

```
jjb24@gcs-lab-vm:~$ gcloud compute instances list
NAME         ZONE        MACHINE_TYPE  PREEMPTIBLE  INTERNAL_IP  EXTERNAL_IP    STATUS
course-vm    us-west1-b  e2-medium                  10.138.0.2                  TERMINATED
gcs-lab-vm   us-west1-b  e2-medium                  10.138.0.9   34.187.151.43  RUNNING
nginx-gb     us-west1-b  e2-medium                  10.138.0.6                  TERMINATED
usgs         us-west1-b  e2-medium                  10.138.0.8   34.182.76.179  RUNNING
Display a menu
```

10

What is the exact error message that is returned?
"ERROR: [gcs-lab@cloud-brown-jjb24.iam.gserviceaccount.com] does not have permission to access b instance [jjb24-earf] (or it may not exist): gcs-lab@cloud-brown-jjb24.iam.gserviceaccount.com does not have storage.objects.create access to the Google Cloud Storage object. Permission 'storage.objects.create' denied on resource (or it may not exist). This command is authenticated as gcs-lab@cloud-brown-jjb24.iam.gserviceaccount.com which is the active account specified by the [core/account] property.

Completed files 0/1 | 0B/303.2kiB

What role needs to be added to the service account's permissions for the VM to have access to add an object to a storage bucket?
Storage object creator

Take a screenshot of the output for your notebook.

```
jjb24@gcs-lab-vm:~$ gcloud storage cp moonquakes.png gs://jjb24-earf/
Copying file://moonquakes.png to gs://jjb24-earf/moonquakes.png
